Indications for Use
- Prevention and management of pressure injury
- Patient comfort
- Use across the continuum of care

Precautions
- If used in a chair, position shifts should be made every 15-30 minutes or per individualized schedule
- Avoid direct contact between skin and product by using a pillowcase, sheet, or breathable under-pad
- Single patient use
- Weight Limit: 300 lbs.

Set-Up

Using the WAFFLE® L.A.D. Pump, insert the tip of the pump into the valve. Refer to the inflation chart on the side of the pump, and inflate your cushion using the recommended level of strokes.

Once the cushion appears about 60% full, check for proper inflation. If you can easily roll one side of the product past the first set of holes, but not to the second, your cushion is ready to use.

Place product on seating surface, valve down and towards the back of the surface.
Cleaning Instructions

The WAFFLE Cushion is single patient use but can be cleaned with standard hospital cleaning wipes if soiled. A complete list of approved cleaning products is available upon request.

For complete instructions, refer to product package insert.
