Pressure injuries (bed sores) can develop when a person sits too long in one position, putting pressure on bony areas. They can also occur when people with fragile skin are moved in their chair.

- 2.5 million patients are affected by pressure injuries each year
- Pressure injuries can develop within 2 hours of experiencing pressure

Your sit bones and tailbone are at risk for pressure injuries

The WAFFLE Cushion Protects You

The WAFFLE Cushion is designed to comfortably cradle your sit bones and tailbone area, lifting you from the surface to decrease pressure. The WAFFLE Cushion is delivered ready to use at its ideal volume.

- Lifts sit bones and tailbone off the surface when properly inflated
- Allows your body to sink into the product, helping increase comfort
- Unique venting holes provide airflow to keep you comfortable

Quick Tip
Your WAFFLE Cushion should only look about 60% full.
