

Clinical FAST FACTS

WAFFLE® Overlay

REACTIVE SUPPORT SURFACE

1

MICROCLIMATE

Air flows from hot to cold. Venting holes built in to the WAFFLE Overlay, keep patients cool and comfortable.

2

VERSATILE

Multiple surfaces.
Multiple departments.
Multiple positions.
Multiple applications.

The WAFFLE Overlay provides pressure injury prevention and comfort throughout the patient journey.

It's versatile enough to be used on a variety of surfaces, like ICU beds and transport carts. And protects patients in a variety of positions, like prone or supine.

But, the WAFFLE Overlay is not just a support surface. It can also be used to help turn patients and as a lateral transfer device.

Multi-Talented!

3

NONPOWERED

The hospital journey takes us places. Not having to rely on power means the WAFFLE Overlay can accompany the patient and protect their skin. **On the GO!**

Without the need for external pumps, no additional air is blown throughout the patient's room.

4

MOBILE

Healing continues at home! The WAFFLE Overlay goes home with patients for seamless comfort and pressure injury protection.

5

RELIEF

The Reactive Air WAFFLE Overlay redistributes pressure across bony prominences to reduce the risk of pressure injuries.
